### **DETAILED ACTION**

#### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-9 are rejected under 35 U.S.C. 102(b) as being anticipated by Green et al. (U.S. Patent No. 4,696,946).

Green teaches a method for topically treating diseases of the skin in a human (see abstract). Green teaches calcium hydroxide and sodium hydroxide (col.8, lines 65-68), ointments as well as lotions (col.8, line 18) which defines an applying agent, antimicrobial agents (col.8, lines 45-48) and antibiotics.

The prior art meets the claims of the application.

#### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-9,12-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Green ('946).

Green is applied above.

Green does not particularly teach a topical nail formulation.

However, future-intended use is not critical in the composition. Green teaches the same composition having the same properties, i.e. a composition which comprises calcium hydroxide, sodium hydroxide, antimicrobial agents and ointments, including lotions and an antibiotic.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to use the teachings of Green, because Green teaches a topical composition comprising calcium hydroxide, sodium hydroxide, antimicrobial agents, and ointments, which is known for the purpose for treating diseases of the skin, and it would have been obvious to one skilled in the art to determine the thickness of the nail through routine experimentation.

**Claims 10 and 11 are allowed.**
